

WHAT TO EXPECT WITH YOUR ELLIPTIGO e11R, e8C OR e3C ELECTRIC BIKE

The ElliptiGO e11R/e8C/e3C electric bike options will ship with the cabling and sensors pre-installed. The motorized front wheel and battery will be shipped separately from the bike. Upon receipt, you will need to install the battery, along with the motorized front wheel using a 19mm open wrench that is provided. The only tool that you'll need to source for the installation is a common slotted flat head screwdriver. Here is the installation support video for this process at <https://youtu.be/zomSFqv7uQ>

Please note - The battery is not fully charged upon shipping, so it will need to be charged prior to first use. The max charging on the battery will be four hours. It is not recommended to leave the battery plugged in past its charging time. The battery may be charged on or off the bike.
